DETAILED ACTION

Allowable Subject Matter

Claims 1 – 12, 14 and 15 (re-numbered as 1 – 14 respectively) are allowed.

The following is an examiner's statement of reasons for allowance: the prior art fails to teach a video transfer system comprising a real time output path through which video data processed by a video processor is sent to a display via a frame buffer, a capturing path which is independent of the real time output path and through which the video data is sent to a system memory via a system bus and not through the frame buffer and a gate in said capturing path, gate being controllable to permit the video data to pass when received from the video processor, wherein a rate at which the video data is sent to the display is unaffected by passage of the video data through the capturing path.

Applicant's background, the closest art of record, discloses a real time output path and a capturing path independent of the real time output path as claimed. Applicant's background fails to disclose a gate in the capturing path and in addition teaches away from the claimed invention as the background discloses "This prevents video data in the off-screen memory 15 from being updated and decreases the amount of updated data to be sent to the display during data capturing, thus reducing the video display rate." (see page 2 lines 17 – 20).
